

NAME

server – listens for communications from clients.

SYNOPSIS

./server <port>

DESCRIPTION

server listens for communications on the port number for clients. Server gets T<n> process to perform as a message from the client. Server waits for another message from clients after processing one message. Returns transaction number to client after message has been processed. Server times out after 30 seconds after last client disconnects if no other client connects in that time.

Options

<port> Must be integer value between 5,000 to 64,000.

EXAMPLES

./server 6000

SEE ALSO

client(1)
